Do the following nodejs assignments:

- 1. Install nodejs (https://nodejs.org).
- 2. Create simple nodejs app, that prints "Hello world" in the console.
- 3. Create new nodejs app:
- Run npm init command

•

Install validator module (https://www.npmjs.com/package/validator)

•

- Try function isDate(), to check for a string if it's a vaild date.
- What's node_Modules folder?

•

• Delete it and reinstall it using command: npm i

•

- What's package.json file? And what are the dependencies key on it?
- 4. What's events in Nodejs?
- 5. What's express module in node js?

Bonus:

- 1. Install express.js
- 2. Use it to create a simple REST API, with the following end points:
- 3. /products (GET, will return all products from a static array you should define it).
- 4. /products/id (GET, will return specific product with the given id)
- 5. /products (POST, will add new product to the products array), and use Postman to test it.
- 6. Try DELETE and PUT.
- 7. What's the difference between PUT and Patch?
